Creating a link to LiveText in D2L

It’s quick and easy to make a link in D2L that will take you and your students directly into LiveText. Here’s how:

1. Log in to D2L, go into your course, and click on Content.

2. Before you can create the LiveText link, you’ll need a module in which to put it. To do this, just click where you see the words “Add a module,” type a name for the module (such as LiveText), and press <Enter>.

3. Click on the Add Existing Activities button and select External Learning Tools from the drop-down list.
4. Click on **LiveText**.

5. Click the grey drop-down icon by the new LiveText link, and choose **Edit Properties In-place**.

6. Click the check box next to **Open as External Resource**.

7. Click back on the **Content** link on the course toolbar. You’ll see your new link.

And that’s it! Just be sure to give your students clear directions about how to find the link.
