SUMMER RESEARCH EXPERIENCE

The Department of Chemistry and Biochemistry has an exciting Summer Research Experience (SRE) for junior colleges interested in chemistry and biochemistry. The students will work on a research project with a faculty member and with other SFA students, participate in departmental activities, and give a presentation to the department about their research and experience in the SRE.

Students should have successfully completed general chemistry I and II prior to the start of Summer I 2015. The application process consists of the following:

1. submit the application,
2. provide a transcript – an unofficial transcript is acceptable,
3. have one chemistry professor submit a letter of recommendation.

All application materials can be submitted to Dr. Michele Harris, mharris@sfasu.edu.

The due date for applications is Friday, February 6, 2015. Students selected for this program will be notified during March 2015. The award amount is a $1700 scholarship to participate in research at SFA during the Summer I Session. Once a student is notified, they will have until April 3rd to accept the award. Students will also be required to apply for admission to SFA as a transient student and enroll in 1 credit hour research course (CHE 275). This course will count toward a bachelor’s degree in Chemistry or Biochemistry should the student transfer to SFA.
